

Bonner Eye Clinic is the leading eye care services provider in northern Minnesota. We have built our practice on providing the latest eye care technology with the best service possible.

What is LASIK?

LASIK is a type of refractive surgery designed to reshape the cornea and produce clearer vision. It is an outpatient laser surgery to correct nearsightedness, farsightedness, and astigmatism with excellent results (95 percent of patients achieve 20/20 vision or better)

At the Bonner Eye Clinic, your surgeon will be present from your initial consultation to your final follow-up exam. A comprehensive eye exam will be done, eye history will be examined, and one of our doctors will be sure that your refractive error has been stable for at least one year.

Call us at 1-800-518-7487 or visit us online at bonnereye.com to learn more.
